

There are many shades of green for your home – from simple steps you can take today to extensive green renovation projects.

CET's GREEN HOME AUDIT is a whole house analysis designed to determine a variety of action steps for greening your home.

We start every GREEN HOME AUDIT with a building science assessment. Improving energy efficiency, indoor air quality and solving comfort and safety concerns are key to making your home greener.

With those bases covered we can take a look at what other technologies and actions might be possible to meet your goals. Let us know if you are considering a renovation project or just want to know what simple, low-cost green options you could implement immediately.

Call CET today to help you achieve a greener home or business!

GREEN HOME AUDIT

Start on your path to a greener home!

What you can expect from CET:

An objective third-party analysis from an organization with 30 years of experience

Individualized, on-site analysis based on your needs

Practical recommendations for taking action

A green home specialist talks with a homeowner about drainage issues at his home

Benefits of Greening Your Home

- Help prevent climate change by reducing your ecological footprint
- Make your home healthier by addressing indoor air quality issues
- Protect watersheds and animal habitats surrounding your home by making outdoor green improvements

CET's green home specialists look at strategies outside the home as well as inside the home

Green Home Audit

Energy Efficiency & Renewable Energy

- Preliminary analysis of your site for solar energy
- Air leakage test
- Assessment of energy saving opportunities

Healthy Home

- Combustion safety & carbon monoxide tests
- Identification of moisture problems and solutions

Local Habitat Protection

- Water conservation strategies
- Strategies for reducing groundwater contamination

Customized Results

A personalized list of recommendations will be provided at the completion of the green home audit to help you take action today.

A green home specialist performs combustion safety testing

A greener home is more efficient, safer and healthier for you!

Optional Infrared Scan of walls is available to identify heat loss and insulation gaps (service available September – April)
